Program name : Autocomplete word ,

Before asking the user for the beginning of the word the program will generate all the required word try structure which are present in the text file named "try.txt" ,

Around 2947 words are present in the file , there many words beginning with the same letter so it will be better if we provide some 2 – 3 starting letters so that the output page will not get filled,

type "gcc try.c" on terminal to compile program .
Then type "./a.out " on treminal,

sample input :

Enter some starting char of word : ab

output:

abandon
ability
able
abortion
about
above
abroad
absence
absolute
absolutely
absorb
abuse
